

“CALEA applies to all facilities-based broadband Internet access and interconnected VoIP service providers.”

FCC 05-153
released August 5, 2005

WHAT IS CALEA?

calea | communications assistance
for law enforcement act

CALEA requires providers to engineer their systems to make wiretapping easier and less expensive for the government.

The original act was passed in 1994 in response to a request for help from law enforcement. CALEA requires providers of commercial voice services to engineer their networks in such a way as to assist law enforcement agencies in executing wiretap orders. On August 5, 2005, the Federal Communications Commission, in response to a request by law enforcement, extended CALEA compliance to include facilities-based Internet and VoIP service providers.

- THE CALEA MONITORING REPORT IS DUE FEB. 12, 2007
- THE CALEA SSI REPORT IS DUE MARCH 12, 2007
- THE DEADLINE FOR CALEA COMPLIANCE IS MAY 14, 2007

sis • secure intercept service™

Complete Administration
Customized Network Integration
Preserved Security

Apogee's Secure Intercept Service™ offers a cost-effective solution in order to avoid high up-front capital costs and minimize the burden of compliance.

Apogee, a Trusted Third Party (TTP), takes the guesswork out of complex CALEA compliance standards by providing customized network solutions, as well as management of the time-consuming administrative procedures and report filings that are required to maintain compliance.

KEY BENEFITS

- ✓ avoid large “start-up” costs
- ✓ minimize operating expenses
- ✓ free-up valuable IT resources
- ✓ secure data exchange
- ✓ customized service for your network
- ✓ adaptable to emerging technology
- ✓ ongoing compliance management

THE SOLUTION

sis • secure intercept service™

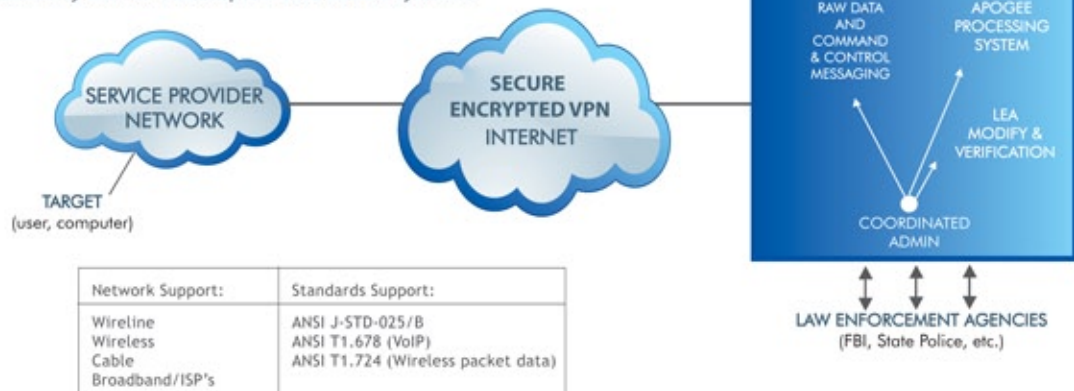

Apogee's Secure Intercept Service™ (SIS) provides a complete compliance solution for the interception, administration, and delivery process to meet standards of CALEA. This option offers a cost-effective alternative to in-house deployment, delivering a reliable and secure solution, covering all CALEA and lawful interception guidelines.

- ▶ **COMPREHENSIVE**
SIS™ is a turnkey service, addressing the technical and operational requirements from start to finish - from receiving the warrant, defining the target, intercepting the data and converting the data to the required format.
- ▶ **CUSTOMIZED**
Apogee's customized intercept services will integrate into your current network system as well as adapt to future modifications to ensure you maintain compliance as your network grows.
- ▶ **COST EFFECTIVE**
SIS™ is a streamlined intercept technology process that will help you avoid unnecessary and excessive up-front hardware and software costs as well as the time and expense required in the administration procedures for ongoing compliance
- ▶ **SECURE**
Apogee understands the importance of preserving your network security, including authenticating the validity each warrant ensuring it is legal and proper.

THE PROCESS

STEPS:

1. Access the intercepted data.
2. Administer the intercept.
3. Convert the intercepted data into a delivery standard.
4. Securely deliver intercepted data to LEA systems.
